

Çatalhöyük Excavations: The 2009–2017 Seasons

Edited by
Ian Hodder

Supplementary material to Chapter 25. Building 113, Building 116, Space 532 and other related spaces

Burcu Tung

Figure S25.1. Northeast-facing view of the western wall, F.3678, of B.116. Also in the photo are midden deposits that belong to Sp.99 and have been cut by constructional trench F.7338, which has in turn been truncated by two post-Neolithic burials F.3685 and F.3689. Some plaster remains at the southern end of the wall can be seen through the cut of F.3689 (photograph by Sofie Ekstrand).

Figure S25.2. North-facing view of northern wall F.7105 (same as F.1021) of Sp.534, B.116. This is an internal wall that was clearly plastered. The constructional trench F.7338 also truncated much of the plaster from the western end of the wall (photograph by Sofie Ekstrand).

Figure S25.3. South-facing view of the first row of the southern foundation wall F.7341, excavated as (21546). The two bricks lay above (21547), which was the same material as between the southern foundation wall and shoring wall F.7104 immediately to the south (photograph by Maciej Chyleński).

Figure S25.4. West-facing view of platform (20431) (photograph by Jason Quinlan).

Figure S25.5. Bin F.3649 (photograph by Jason Quinlan).

Figure S25.6. South-facing overview of the rubble of Sp.95 by bins F.3649 and F.3650. Horncore 19476.x2 was immediately next to the burnt building materials. In front of the bins is ground stone 19476.x6 (photograph by Jason Quinlan).
