

Çatalhöyük Excavations: The 2009–2017 Seasons

Edited by
Ian Hodder

Colour figures for Chapter 25. Building 113, Building 116, Space 532 and other related spaces

Burcu Tung

Figure 25.1. North-facing overview of the North Shelter, during a weekly site tour in 2014. The cross-sectioned B.113 is immediately north of the two northern platforms of B.52. To the east of B.113 are the walls of B.116 (photograph by Jason Quinlan).

Figure 25.4. South-facing view of Sp.214 when first exposed in 2003. A blocked crawl-hole is visible through F.7105. Also visible is the abuttal of F.1018 to F.7105, clearly showing that it is a later phase of construction related to B.116 (photograph by Michael Ashley).

Figure 25.5. West-facing post-excavation overview of B.113, built above Sp.532 to the south. The north–south cross section of B.113 shows how the southern end of the building contained a rather shallow wall (five courses of bricks), whereas the northern end of the building’s foundation wall was at least nine courses, with another five courses of wall sitting above the foundation bricks. Sp.532, which is partially exposed here towards the south, slopes descending towards the north (photograph by Jason Quinlan).

Figure 25.7. Orthophoto of B.113 at the end of excavations in this building (orthophoto by Çatalhöyük Research Project).

Figure 25.8. Northern foundation wall F.7619 (photograph by Jason Quinlan).

Figure 25.9. Cluster of bones in (30119), placed on the outer face of the western wall of B.113 (photograph by Arek Klimowicz).

Figure 25.10. North-facing overview of Sp.95, B.113 (photograph by Jason Quinlan).

Figure 25.11. South-facing view of the BACH trench at the end of excavations within Sp.89 and Sp.88 in 2003. To the left is wall F.7105, clearly bonded to wall F.3677. Immediately west of wall F.3677 is a wall made from grey bricks, which may be a shoring wall. To the west of this is the irregular foundation wall F.7619 (photograph by Michael Ashley).
